AMPLIFIERS

Effects of impedance mismatch and imperfect isolation on distortion cancellation in feedforward amplifiers p35
High-impedance voltage bias circuit for MOS amplifiers p437
High-performance transimpedance formulation for MESFET- and HBT-based monolithic microwave integrated circuits p429
New method to bias CMOS cascode amplifiers p440
Noise performance analysis of bipolar operational amplifier based on the noise matrix superposition expression p343
Pressure sensors interfacing circuit with digital output p332
State variable synthesis of single resistance controlled grounded capacitor oscillators using only two CFOAs p135

ANALOGUE ELECTRONICS

Design and analysis of a ±1 V CMOS four-quadrant analogue multiplier p148
Development of efficient switched network and mixed-mode simulators p24
Efficient real-time modelling of substrate coupling in large mixed-signal Spice designs, using analogue HDL p180
Four-quadrant analogue CMOS multiplier cell for VLSI signal and information processing p132
Hardware implementation of a pulse-stream neural network p141
Low-voltage single power supply four-quadrant multiplier using floating-gate MOSFETs p40
Square-rooting and vector summation circuits using current conveyors p139
Testing of analogue and mixed-signal circuits by using supply current measurements p319
Time-domain fault diagnosis of analogue circuits in the presence of noise p125
Tracking switched-capacitor CMOS current reference p44
Transient response testing of analogue components in mixed-signal systems: a review p314

AUTOMATIC TEST SYSTEMS

Built-in self-test generator design using nonuniform cellular automata model p155
IFIS: an online test methodology p1
Power-oriented partial-scan design approach p229

CIRCUIT CAD

Fast search algorithm for tolerance design p19
Parallel optimal statistical design method with response surface modelling using genetic algorithms p7

CIRCUIT COMPONENTS

Analysis of self-excited electronic ballasts using BJTs/MOSFETs as switching devices p95

CIRCUIT THEORY AND DESIGN

Analysis of IGBT modules connected in series p354
Development of efficient switched network and mixed-mode simulators p24
Efficient real-time modelling of substrate coupling in large mixed-signal Spice designs, using analogue HDL p180
Fast search algorithm for tolerance design p19
Multi-level factorisation technique for pass transistor logic p48
Multiple fault diagnosis in analogue circuits using time domain response features and multilayer perceptrons p213
New current conveyor for high-speed low-power current sensing p85
New method to bias CMOS cascode amplifiers p440
Parallel optimal statistical design method with response surface modelling using genetic algorithms p7
Passive lossless snubbers for DC/DC converters p396
Quaternary voltage-mode CMOS circuits for multiple-valued logic p71
Time-domain fault diagnosis of analogue circuits in the presence of noise p125

CLOSED LOOP SYSTEMS

Closed-loop silicon accelerometers p325

CMOS INTEGRATED CIRCUITS

Collapsing the CMOS transistor chain to an effective single equivalent transistor p347
Complementary half-swing bus architecture and its application for wide band SRAM macros p337
Design and analysis of a ±1 V CMOS four-quadrant analogue multiplier p148
Design and characterisation of a CMOS VLSI self-timed multiplier architecture based on a bit-level pipelined-array structure p247
Four-quadrant analogue CMOS multiplier cell for VLSI signal and information processing p132
Integrated universal biquad based on triple-output OTAs and using digitally programmable zeros p192
Low-voltage single power supply four-quadrant multiplier using floating-gate MOSFETs p40
Modelling output waveform and propagation delay of a CMOS inverter in the submicron range p402
New current conveyor for high-speed low-power current sensing p85
New method to bias CMOS cascode amplifiers p440
Novel MOSFET-C continuous-time oscillator with precision amplitude control and self-start p90
Quaternary voltage-mode CMOS circuits for multiple-valued logic p71
S^2I first-order incremental A/D converter p78
Tracking switched-capacitor CMOS current reference p44

COMPUTER APPLICATIONS

Complementary half-swing bus architecture and its application for wide band SRAM macros p337
Development of efficient switched network and mixed-mode simulators p24
Fast search algorithm for tolerance design p19
Multi-level factorisation technique for pass transistor logic p48
New current conveyor for high-speed low-power current sensing p85
New method to bias CMOS cascode amplifiers p440
Parallel optimal statistical design method with response surface modelling using genetic algorithms p7
Power-oriented partial-scan design approach p229
Quaternary voltage-mode CMOS circuits for multiple-valued logic p71

CONVERTORS

Passive lossless snubbers for DC/DC converters p396
Single-phase diode rectifier with novel passive filter p254
Turn-off analysis of PT and NPT IGBTs in zero-current switching p185

DIELECTRIC MATERIALS AND DEVICES

Lead zirconate titanate thin films for microwave device applications p373

DIGITAL ARITHMETIC

GA-based design of multiplierless 2-D state-space digital filters with low roundoff noise p118
Modulo multipliers using polynomial rings p443
Most-significant-bit-first serial/parallel multiplier p278
New low complexity bidirectional systolic structures for serial multiplication over the finite field $GF(q^m)$ p55

DIGITAL ELECTRONICS

Analysis of interpolation waveforms in time-averaging interpolative digital-to-analogue converters p389
Collapsing the CMOS transistor chain to an effective single equivalent transistor p347
Complementary half-swing bus architecture and its application for wide band SRAM macros p337
Efficient digital sweep oscillator with extremely low sweep rates p409
IFIS: an online test methodology p1
Modelling output waveform and propagation delay of a CMOS inverter in the submicron range p402
Modulo multipliers using polynomial rings p443
New current conveyor for high-speed low-power current sensing p85
Optimised weighted-resistor digital to analogue converter p197
S^2I first-order incremental A/D converter p78

DIGITAL FILTERS

GA-based design of multiplierless 2-D state-space digital filters with low roundoff noise p118
Model reduction of 2-D separable-denominator transfer functions via quasi-Kalman decomposition p13

DISTRIBUTED PARAMETER SYSTEMS

Model reduction of 2-D separable-denominator transfer functions via quasi-Kalman decomposition p13

ELECTRONIC CIRCUITS

Enzyme transistor circuits p264

ENERGY CONVERSION

Device characteristics of $CuPc/TiO_2$ heterojunctions p383

EPITAXIAL GROWTH

GaAs MOSFET using MBE-grown Ga_2O_3 (Gd_2O_3) as gate oxide p162

FILTERS AND FILTERING

Chaos diode p361
Feasible designs for high order switched-current filters p297
High-Q gyrator-based monolithic active tunable bandstop filter p243
Integrated universal biquad based on triple-output OTAs and using digitally programmable zeros p192
Ladder decompositions for wideband SI filter applications p306
New current conveyor for high-speed low-power current sensing p85
Passive lossless snubbers for DC/DC converters p396
Programmable canonical switched-capacitor bump equaliser architecture p285
Single-phase diode rectifier with novel passive filter p254
Square-rooting and vector summation circuits using current conveyors p139
Tracking switched-capacitor CMOS current reference p44

FORMAL LOGIC

Synthesis of MVL functions using input and output assignments p207

INFORMATION THEORY

Model reduction of 2-D separable-denominator transfer functions via quasi-Kalman decomposition p13

INSTRUMENTATION AND MEASUREMENT

Closed-loop silicon accelerometers p325
Flammable gas sensors based on sol-gel materials p379
Pressure sensors interfacing circuit with digital output p332
S^2I first-order incremental A/D converter p78

INSULATED GATE FIELD EFFECT TRANSISTORS

Analysis of IGBT modules connected in series p354
GaAs MOSFET using MBE-grown Ga_2O_3 (Gd_2O_3) as gate oxide p162
General large-signal charge-control equations for the MOSFET drain and source current under nonquasistatic conditions p236
Turn-off analysis of PT and NPT IGBTs in zero-current switching p185

INTEGRATED CIRCUITS

Collapsing the CMOS transistor chain to an effective single equivalent transistor p347
Effects of impedance mismatch and imperfect isolation on distortion cancellation in feedforward amplifiers p35
Efficient real-time modelling of substrate coupling in large mixed-signal Spice designs, using analogue HDL p180
Hardware implementation of a pulse-stream neural network p141
High-impedance voltage bias circuit for MOS amplifiers p437
High-performance transimpedance formulation for MESFET- and HBT-based monolithic microwave integrated circuits p429
IFIS: an online test methodology p1
Inductance in VLSI interconnection modelling p175
Modelling output waveform and propagation delay of a CMOS inverter in the submicron range p402
Multi-level factorisation technique for pass transistor logic p48
New method to bias CMOS cascode amplifiers p440
Noise performance analysis of bipolar operational amplifier based on the noise matrix superposition expression p343
Packaging impact on switching noise in high-speed digital systems p446
Power-oriented partial-scan design approach p229
Testing of analogue and mixed-signal circuits by using supply current measurements p319

LINEAR NETWORK ANALYSIS

Noise performance analysis of bipolar operational amplifier based on the noise matrix superposition expression p343

LOGIC AND SWITCHING CIRCUITS

Collapsing the CMOS transistor chain to an effective single equivalent transistor p347
Design and characterisation of a CMOS VLSI self-timed multiplier architecture based on a bit-level pipelined-array structure p247
IFIS: an online test methodology p1
Modelling output waveform and propagation delay of a CMOS inverter in the submicron range p402
Most-significant-bit-first serial/parallel multiplier p278
Multi-level factorisation technique for pass transistor logic p48
New low complexity bidirectional systolic structures for serial multiplication over the finite field $GF(q^m)$ p55
Power-oriented partial-scan design approach p229
Quaternary voltage-mode CMOS circuits for multiple-valued logic p71
Synthesis of MVL functions using input and output assignments p207

LOGIC DESIGN

Collapsing the CMOS transistor chain to an effective single equivalent transistor p347
IFIS: an online test methodology p1
Multi-level factorisation technique for pass transistor logic p48
Power-oriented partial-scan design approach p229
Quaternary voltage-mode CMOS circuits for multiple-valued logic p71
Synthesis of MVL functions using input and output assignments p207

MATERIALS AND MATERIALS TESTING

Flammable gas sensors based on sol-gel materials p379
Lead zirconate titanate thin films for microwave device applications p373
Synthesis of luminescent sol-gel materials for active electronic devices p364

MATHEMATICAL TECHNIQUES

Fast search algorithm for tolerance design p19
GA-based design of multiplierless 2-D state-space digital filters with low roundoff noise p118
Model reduction of 2-D separable-denominator transfer functions via quasi-Kalman decomposition p13
Mutual conversions between generalised arithmetic expansions and free binary decision diagrams p219
Noise performance analysis of bipolar operational amplifier based on the noise matrix superposition expression p343
Parallel optimal statistical design method with response surface modelling using genetic algorithms p7
Shortest paths in regular grids p289
Synthesis of MVL functions using input and output assignments p207

MEASUREMENT OF SPECIFIC VARIABLES

Closed-loop silicon accelerometers p325
Flammable gas sensors based on sol-gel materials p379
Pressure sensors interfacing circuit with digital output p332
Testing of analogue and mixed-signal circuits by using supply current measurements p319

MICROWAVE CIRCUITS

High-performance transimpedance formulation for MESFET- and HBT-based monolithic microwave integrated circuits p429
Lead zirconate titanate thin films for microwave device applications p373
Multidimensional signal-noise neural network model p111
Novel low-cost, low-power modulator/demodulator using a single GaAs field effect transistor p165
Smith chart formulation of performance characterisation for a microwave transistor p419

MODULATORS AND DEMODULATORS

Novel low-cost, low-power modulator/demodulator using a single GaAs field effect transistor p165

NETWORK ANALYSIS

Development of efficient switched network and mixed-mode simulators p24
Efficient digital sweep oscillator with extremely low sweep rates p409
Feasible designs for high order switched-current filters p297
Ladder decompositions for wideband SI filter applications p306
Passive lossless snubbers for DC/DC converters p396
S^2I first-order incremental A/D converter p78

NEURAL NETS

Hardware implementation of a pulse-stream neural network p141
Multidimensional signal-noise neural network model p111

NONLINEAR NETWORK ANALYSIS

State variable synthesis of single resistance controlled grounded capacitor oscillators using only two CFOAs p135

NONLINEAR OPTICS

Modelling of semiconductor laser amplifier for the terahertz optical asymmetric demultiplexer p61

NUMERICAL ANALYSIS

Analysis of IGBT modules connected in series p354
Analysis of interpolation waveforms in time-averaging interpolative digital-to-analogue converters p389
Fast search algorithm for tolerance design p19
General large-signal charge-control equations for the MOSFET drain and source current under nonquasistatic conditions p236
Parallel optimal statistical design method with response surface modelling using genetic algorithms p7
Time-domain fault diagnosis of analogue circuits in the presence of noise p125

OPTICAL COMMUNICATION

Modelling of semiconductor laser amplifier for the terahertz optical asymmetric demultiplexer p61

OPTICAL IMAGE PROCESSING

Realisation of soft morphological filters p201

OPTICAL MATERIALS AND DEVICES

Sol-gel derived organic-inorganic hybrid materials for photonic applications p369
Synthesis of luminescent sol-gel materials for active electronic devices p364

PARALLEL PROCESSING

New low complexity bidirectional systolic structures for serial multiplication over the finite field $GF(q^m)$ p55
Parallel optimal statistical design method with response surface modelling using genetic algorithms p7

POWER ELECTRONICS

Analysis of IGBT modules connected in series p354

POWER SYSTEMS AND APPLICATIONS

Analysis of self-excited electronic ballasts using BJTs/MOSFETs as switching devices p95

POWER SYSTEMS AND PLANTS

Analysis of self-excited electronic ballasts using BJTs/MOSFETs as switching devices p95

PROBABILITY AND STATISTICS

Fast search algorithm for tolerance design p19
Parallel optimal statistical design method with response surface modelling using genetic algorithms p7

PRODUCTION ENGINEERING

IFIS: an online test methodology p1
Packaging impact on switching noise in high-speed digital systems p446

Transient response testing of analogue components in mixed-signal systems: a review p314

SEMICONDUCTOR DEVICE MODELLING

Advanced physical model for the optimisation of the width of a resistive Schottky barrier field plate p260
Analysis of IGBT modules connected in series p354
Current-dependent collector resistance of the bipolar transistor in quasi-saturation p66
General large-signal charge-control equations for the MOSFET drain and source current under nonquasistatic conditions p236
Modelling of semiconductor laser amplifier for the terahertz optical asymmetric demultiplexer p61
Multidimensional signal-noise neural network model p111
Novel velocity-electric field relation for modelling of compound semiconductor field-effect transistors p170
Smith chart formulation of performance characterisation for a microwave transistor p419

SEMICONDUCTOR DEVICES AND MATERIALS

Advanced physical model for the optimisation of the width of a resistive Schottky barrier field plate p260
Analysis of IGBT modules connected in series p354
Chaos diode p361
Current-dependent collector resistance of the bipolar transistor in quasi-saturation p66
Device characteristics of CuPc/TiO_2 heterojunctions p383
MOS and bipolar gated thyristor: a thyristor with IGBT switching characteristics p105
Novel low-cost, low-power modulator/demodulator using a single GaAs field effect transistor p165
Novel velocity-electric field relation for modelling of compound semiconductor field-effect transistors p170
Single-phase diode rectifier with novel passive filter p254
Smith chart formulation of performance characterisation for a microwave transistor p419
Turn-off analysis of PT and NPT IGBTs in zero-current switching p185

SEMICONDUCTOR LASERS

Modelling of semiconductor laser amplifier for the terahertz optical asymmetric demultiplexer p61

SIGNAL GENERATORS

Chaos diode p361
Efficient digital sweep oscillator with extremely low sweep rates p409
Generation of second-order single-OTA RC oscillators p271
Novel MOSFET-C continuous-time oscillator with precision amplitude control and self-start p90
State variable synthesis of single resistance controlled grounded capacitor oscillators using only two CFOAs p135

SIGNAL PROCESSING

Model reduction of 2-D separable-denominator transfer functions via quasi-Kalman decomposition p13

SIMULATION, MODELLING AND IDENTIFICATION

Model reduction of 2-D separable-denominator transfer functions via quasi-Kalman decomposition p13

SWITCHING SYSTEMS

Complementary half-swing bus architecture and its application for wide band SRAM macros p337
Modelling of semiconductor laser amplifier for the terahertz optical asymmetric demultiplexer p61

SWITCHING THEORY

Mutual conversions between generalised arithmetic expansions and free binary decision diagrams p219
Shortest paths in regular grids p289
Synthesis of MVL functions using input and output assignments p207

SYSTEMS THEORY

Hardware implementation of a pulse-stream neural network p141

TELECOMMUNICATION

Novel low-cost, low-power modulator/demodulator using a single GaAs field effect transistor p165

THIN FILM GROWTH

Device characteristics of CuPc/TiO_2 heterojunctions p383
Flammable gas sensors based on sol-gel materials p379
Lead zirconate titanate thin films for microwave device applications p373
Sol-gel derived organic-inorganic hybrid materials for photonic applications p369
Synthesis of luminescent sol-gel materials for active electronic devices p364

TRANSFORMERS

Analysis of self-excited electronic ballasts using BJTs/MOSFETs as switching devices p95
